PROJECT DESIGN PHASE - 1
SOLUTION REQUIREMENTS (FUNCTIONAL & NON FUNCTIONAL)

DATE	4 October 2022
TEAM ID	PNT2022TMID15490
PROJECT NAME	Estimate the Crop yield using Data Analytics
MAXIMUM MARK	4 Marks

Functional requirement:

Following are the functional requirements of the proposed solution .

Fr.no	Functional requirement	Sub requirement (story/subtask)
Fr-1	User registration	Registration through form Registration through Gmail
Fr-2	User confirmation	Confirmation via OTP Confirmation via Email
Fr-3	Capturing image	Capture the image of the leaf And check the parameter of the captured image .
Fr-4	Image processing	Upload the image for the prediction of the seasonal images for the crop yield.
Fr-5	Leaf identification	Identify the seasonal images and estimate the crop yield .
Fr-6	Image description	Suggesting the best seasonal images for the correct yield.

Non-functional requirement:

Following are the non-functional requirement of the proposed solution

NFr.no	Non-functional requirement	Description
Nfr-1	Usability	Datasets of all the seasonal images of crops is used to detecting the estimation of that correct season for right cropping.
Nfr-2	Security	The information belongs to the user and seasonal images are secured highly.
Nfr-3	Reliability	The leaf quality is important for the predicting the crop yield.
Nfr-4	Performance	The performance is based on the quality of the leaf used for yield prediction
Nfr-5	Availability	It is available for all user to predict the yield in the plant
Nfr-6	Scalability	Increasing the prediction of the yield from the given seasonal pictures of those crops.
